

Company: Razorpay
Role: Frontend Engineer
Difficulty: Medium
Round: Technical Round

Overall Experience:

Technical Round 1: Live coding - Build a responsive navbar with dropdown using vanilla JS, HTML, and CSS in 30 minutes.

Discussed event delegation, closures, scope chain, and prototypal inheritance in JavaScript.

Technical Round 2: Implement a debounce function from scratch.

Explained virtual DOM reconciliation in React,
state management options (Redux vs Context API),
and performance optimization tips like lazy loading and code splitting.

Tips: Razorpay tests deep JavaScript fundamentals before framework knowledge.
Strong understanding of closures, event loop, and promises is essential.
