

Company: Flipkart
Role: SDE-1
Difficulty: Hard
Round: All Rounds

Overall Experience:

Machine Coding Round: Build a simple in-memory key-value store with TTL support in 90 minutes. Must write clean, modular, runnable code with proper OOP architecture. Tested using multiple test cases.

Technical Round: Design an inventory management system for e-commerce. Discussed database indexing, caching strategies, handling concurrency, and resolving race conditions during peak sale events like Big Billion Day.

HR/Behavioral: Discussion on conflict resolution, career goals, and cultural fit within the engineering team.

Tips: Flipkart heavily tests machine coding. Practice building small end-to-end systems.
